

## HIGH-PERFORMANCE CONTENT-FILTERING SYSTEM

Our system is a software solution that provides high-speed web traffic filtering for networks up to 10 Gbps.

Easy to configure and manage, our system is perfect for businesses of all sizes and protects users from web-based threats and undesirable content.

### VALUE PROPOSITION

---

#### Network security

- Protects against web-based viruses, phishing attacks and spyware
- Combats botnets
- Blocks potentially dangerous downloads

---

#### Web access policies

- URL filtering
- Granular filtering policies for users and groups
- Statistics and reports

---

#### Seamless integration with existing infrastructure

- Supports virtualization on all hypervisors
  - Can be used as a gateway
  - Offers proxy server functionality
- 

### KEY FEATURES

- Filters content by domain name, URL, category and web page content
- Filters encrypted HTTPS traffic
- Uses relevant cloud-based web filtering databases, which are updated 24/7
- Blocks files based on file extension and MIME type
- Filters user search requests
- Forces safe search for users
- Blocks IP addresses, networks and protocols
- Provides Internet usage reports and statistics

## FEATURE INSIGHTS

### Website categorization:

- Cloud database containing over 140 website categories and over 500 million URLs, updated automatically by web crawlers
  - Real-time text analysis using dictionaries accurately categorizes web page content to reliably block undesirable content on all websites
  - Search request filtering and forced safe search blocks user access to inappropriate or non-business content
  - Web proxy sites are blocked to prevent users from circumventing web access policies
- 

### Network and user security:

- Cloud database containing over 140 website categories and over 500 million URLs, updated automatically by web crawlers
  - Real-time text analysis using dictionaries accurately categorizes web page content to reliably block undesirable content on all websites
  - Search request filtering and forced safe search blocks user access to inappropriate or non-business content
  - Web proxy sites are blocked to prevent users from circumventing web access policies
- 

### Flexible integration:

- Suitable for installation on all servers on the x86-64 platform
  - Virtualization supported on all modern hypervisors: VMWare, Microsoft Hyper-V, VirtualBox, KVM, and Citrix XenServer
  - Option to use server as gateway or proxy server
-
